The invention relates to a method for the phenomenological
description of target substances using described substance
libraries. The invention also relates to a method for selecting

the components of a combinatorial substance library for the purpose of active ingredient screening and to the described and combinatorially produced substance libraries as such.; La presente invention concerne un procede de description phenomenologique de substances cibles a l'aide des bibliotheques de substances decrites, un procede de selection des constituants d'une bibliotheque combinatoire de substances pour le criblage de principes actifs, ainsi que les bibliotheques de substances decrites et produites de maniere combinatoire.; Die vorliegende Erfindung betrifft ein Verfahren zur phanomenologischen Beschreibung von Zielsubstanzen unter Verwendung charakterisierter Substanzbibliotheken und ein Verfahren zur Auswahl von Komponenten einer kombinatorischen Substanzbibliothek fur das Wirkstoffscreening sowie die charakterisierten und kombinatorisch erzeugten Substanzbibliotheken selbst.
